Teicoplanin 200 mg Teicoplanin 400 mg

Powder for solution for Injection/infusion or oral solution teicoplanin

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- . If you have any further questions, ask your doctor, pharmacist or nurse.
- If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section

What is in this leaflet

- 1. What Teicoplanin is and what it is used for
- 2. What you need to know before you take Teicoplanin
- 3. How to take Teicoplanin
- 4. Possible side effects
- 5. How to store Teicoplanin
- 6. Contents of the pack and other information

IT IS USED FOR Teicoplanin is an antibiotic. It contains a medicine

called 'teicoplanin'. It works by killing the bacteria

1. WHAT TEICOPLANIN IS AND WHAT

that cause infections in your body. Teicoplanin is used in adults and children (including newborn babies) to treat bacterial

- infections of: • the skin and underneath the skin - sometimes called 'soft tissue'
- · the bones and joints
- the lung
- the urinary tract
- the heart sometimes called 'endocarditis' • the abdominal wall - peritonitis
- the blood, when caused by any of the conditions
- Teicoplanin can be used to treat some infections

caused by 'Clostridioides difficile' bacteria in the gut. For this, the solution is taken by mouth.

YOU TAKE TEICOPLANIN Do not take Teicoplanin:

2. WHAT YOU NEED TO KNOW BEFORE

• if you are allergic to teicoplanin or any of the other ingredients of this medicine (listed in

section 6). Warnings and precautions

Talk to your doctor, pharmacist or nurse before

taking Teicoplanin:

• if you are allergic to an antibiotic called 'vancomycin' if you have a flushing of your upper part of your

- body (red man syndrome)
- · if you have a decrease in platelet count (thrombocytopenia)
- · if you have kidney problems · if you are taking other medicines which may cause hearing problems and/or kidney
- problems. You may have regular tests to check if
- your blood, kidneys and/or liver are working properly (see 'Other medicines and Teicoplanin). If any of the above apply to you (or you are not sure), talk to your doctor, pharmacist or nurse before you take Teicoplanin.

During treatment you may have tests to check your blood, your kidneys, your liver and/or your

hearing. This is more likely if: · your treatment will last for a long time

hearing.

 you need to be treated with high loading doses (12mg/kg twice a day) you have a kidney problem you are taking or may take other medicines that

may affect your nervous system, kidneys or

In people who take Teicoplanin for a long time, bacteria that are not affected by the antibiotic may grow more than normal – your doctor will check for this.

Tell your doctor, pharmacist or nurse if you are taking, have recently taken or might take any other

medicines. This is because Teicoplanin can affect

the way some other medicines work. Also, some medicines can affect the way Teicoplanin works.

Other medicines and Teicoplanin

In particular, tell your doctor, pharmacist or nurse if you are taking the following medicines: Aminoglycosides as they must not be mixed together with Teicoplanin in the same injection. They may also cause hearing problems and/or kidney problems. amphotericin B – a medicine that treats fungal

and/or kidney problems ciclosporin – a medicine that affects the immune system which may cause hearing problems and/or kidney problems cisplatin – a medicine that treats malignant

tumours which may cause hearing problems

infections which may cause hearing problems

water tablets (such as furosemide) – also called 'diuretics' which may cause hearing problems and/or kidney problems. If any of the above apply to you, (or you are not

sure), talk to your doctor, pharmacist or nurse

and/or kidney problems

before taking Teicoplanin. Pregnancy, breast-feeding and fertility If you are pregnant, think that you might be

doctor, pharmacist or nurse for advice before taking this medicine. They will decide whether or not you are given this medicine while you are pregnant. There may be a potential risk of inner ear and kidney problems. Tell your doctor if you are breast-feeding, before

pregnant or are planning to have a baby, ask your

using this medicine. They will decide whether or not you can keep breast-feeding, while you are given Teicoplanin. Studies in animals reproduction have not shown evidence of fertility problems.

Driving and using machines You may have headaches or feel dizzy while being

treated with Teicoplanin. If this happens, do not drive or use any tools or machines. Teicoplanin contains sodium

This medicine contains less than 1 mmol sodium

(23 mg) per vial and is essentially 'sodium-free'.

3. HOW TO TAKE TEICOPLANIN The recommended dose is:

Adults and children (12 years and over) with

no kidney problems

infections Starting dose (for the first three doses): 400 mg (this equates to 6 mg for every kilogram of body weight), given every 12 hours, by injection into

Skin and soft tissue, lung and urinary tract

- a vein or muscle Maintenance dose: 400 mg (this equates to 6 mg for every kilogram of body weight), given
- once a day, by injection into a vein or muscle Bone and joint infections, and heart infections

Starting dose (for the first three to five doses): 800 mg (this equates to 12 mg for every

kilogram of body weight), given every 12 hours, by injection into a vein or muscle • Maintenance dose: 800 mg (this equates to 12 mg for every kilogram of body weight), given once a day, by injection into a vein or muscle

Infection caused by 'Clostridioides difficile' bacteria The recommended dose is 100 to 200 mg by

mouth, twice a day for 7 to 14 days.

Adults and elderly patients with kidney problems If you have kidney problems, your dose will

treatment: For people with mild and moderate kidney problems - the maintenance dose will be given every two days, or half of the maintenance dose

will be given once a day.

usually need to be lowered after the fourth day of

• For people with severe kidney problems or on haemodialysis - the maintenance dose will be given every three days, or one-third of the maintenance dose will be given once a day.

The starting dose is 6 mg for every kilogram of body weight, as a single injection into a vein, followed by:

Peritonitis for patients on peritoneal dialysis

· Week one: 20 mg/L in each dialysis bag • Week two: 20 mg/L in every other dialysis bag Week three: 20 mg/L in the overnight dialysis

Babies (from birth to the age of 2 months) • Starting dose (on the first day): 16 mg for every

a drip into a vein. · Maintenance dose: 8 mg for every kilogram of body weight, given once a day, as an infusion through a drip into a vein.

kilogram of body weight, as an infusion through

Children (from 2 months to 12 years) Starting dose (for the first three doses): 10 mg for every kilogram of body weight, given every 12 hours, by injection into a vein. Maintenance dose: 6 to 10 mg for every

kilogram of body weight, given once a day, by injection into a vein.

It will be given by injection into a vein

How Teicoplanin is given The medicine will normally be given to you by a doctor or nurse.

(intravenous use) or muscle (intramuscular • It can also be given as an infusion through a drip into a vein.

Only the infusion should be given in babies from birth to the age of 2 months. To treat certain

(oral use). If you take more Teicoplanin than you

infections, the solution may be taken by mouth

It is unlikely that your doctor or nurse will give you too much medicine. However, if you think you have been given too much Teicoplanin or if you are agitated, talk to your doctor or nurse straight

Your doctor or nurse will have instructions about

when to give you Teicoplanin. It is unlikely that they will not give you the medicine as prescribed. However, if you are worried, talk to your doctor or

If you forget to take Teicoplanin

If you stop taking Teicoplanin Do not stop having this medicine without first talking to your doctor, pharmacist or nurse.

Method of administration

The following information is intended for medical or healthcare professionals only: Practical information for healthcare professionals on preparation and handling of

This medicine is for single use only.

Teicoplanin 200 mg

teicoplanin

The injection will be given either as a bolus over 3 to 5 minutes or as a 30-minute infusion. Only the infusion should be given in babies from birth to the age of 2 months. The reconstituted solution may also be given by mouth.

The reconstituted solution may be injected directly or alternatively further diluted.

Preparation of reconstituted solution Slowly inject 3.14 ml of water for injections into the powder vial.

- Gently roll the vial between the hands until the powder is completely dissolved. If the solution does become foamy, then it should be left to stand for about 15 minutes. The reconstituted solutions will contain 200 mg of teicoplanin in 3.0 ml and 400 mg in
- Only clear and yellowish solutions should be used. The final solution is isotonic with plasma and has a pH of 6.0-8.0.
- Nominal teicoplanin content of vial 400 ma 200 mg Volume of powder vial 10 ml 20 ml Volume containing nominal teicoplanin dose (extracted by 5 mL syringe and 3.0 ml 3.0 ml 23 G needle)

4. POSSIBLE SIDE EFFECTS

Like all medicines, this medicine can cause side effects, although not everybody gets them.

Serious side effects

Stop your treatment and tell your doctor or nurse straight away, if you notice any of the following serious side effects - you may need urgent medical treatment:

Uncommon (may affect up to 1 in 100 people) sudden life-threatening allergic reaction - the

signs may include: difficulty in breathing or wheezing, swelling, rash, itching, fever, chills

Rare (may affect up to 1 in 1000 people) flushing of the upper body

Not known (frequency cannot be estimated from

the available data) blistering of the skin, mouth, eyes or genitals

- these may be signs of something called 'toxic epidermal necrolysis' or 'Stevens-Johnson

syndrome' or 'drug reaction with eosinophilia and systemic symptoms (DRESS)'. DRESS appears initially as flu-like symptoms and a rash on the face then an extended rash with a high temperature, increased levels of liver enzymes seen in blood tests and an increase in a type of white blood cell (eosinophilia) and enlarged lymph nodes. Tell your doctor or nurse straight away, if you notice any of the side effects above.

Tell your doctor or nurse straight away, if you notice any of the following serious side

effects - you may need urgent medical

Uncommon (may affect up to 1 in 100 people) · swelling and clotting in a vein · difficulty in breathing or wheezing

- (bronchospasm) • getting more infections than usual - these could be signs of a decrease in your blood cell count
- Not known (frequency cannot be estimated from the available data)

• lack of white blood cells - the signs may include: fever, severe chills, sore throat or mouth ulcers (agranulocytosis)

- · kidney problems or changes in the way your kidneys work - shown in tests. Frequency or severity of kidney problems may be increased if
- you receive higher doses. epileptic fits Tell your doctor or nurse straight away, if you notice any of the side effects above.
- Other side effects

treatment:

Talk to your doctor, pharmacist or nurse if you get any of these:

Pain Fever

- Uncommon (may affect up to 1 in 100 people)
- · decrease in platelet count. · raised blood levels of liver enzymes

· raised in blood levels of creatinine (to monitor your kidney)

- hearing loss, ringing in the ears or a feeling that
- you, or things around you are moving feeling or being sick (vomiting), diarrhoea
- · feeling dizzy or headache Rare (may affect up to 1 in 1,000 people)

· infection (abscess).

Common (may affect up to 1 in 10 people) Rash, erythema, pruritus

Reporting of side effects If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme Website: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store. By reporting side effects you can

help provide more information on the safety of this
